

JobQueue 2020.01.h1

Release Notes

1. OVERVIEW

As a web-based simulation job management platform, JobQueue mainly consists of “Web UI”, “User Manager”, “Job Manager” and “Process Manager”. Web UI is the user interface to access this system. User Manager helps you manage login accounts, including add and delete the account, set up a password and define priority. Job Manager submits simulation jobs to a queue, manage job priority, monitor job status and so on. Process Manager is an independent service process, which is always running to detect and manage simulation jobs.

The Release Notes cover the following releases:

JobQueue 2020.01.h1

Release Date: September 18, 2020

The Release Notes present the latest information about JobQueue Version 2020.01.h1 in the following sections:

- [Supported Operating Systems](#)
- [New Features and Enhancements in JobQueue 2020.01](#)
- [New Features and Enhancements in JobQueue 2020.01.h1](#)

2. SUPPORTED OPERATING SYSTEMS

JobQueue 2020.01.h1 is available on both Windows and Linux. Obtain the appropriate binary executable files for your operating system. The supported platforms for this release include:

- Windows XP or above
- Linux

3. New Features and Enhancements in JOBQUEUE 2020.01

JobQueue 2020.01 provides new features and enhancements as described in the following sections.

3.1 Usability Improvements

- Supported queue using computer resource on AWS cloud, and supported dynamically starting computer node
- Optimized security of system login, password encryption supported
- Optimized HFSS separated submission flow, show status information if error occurred
- Optimized startup flow of management node
- Optimized processing of job queue, improved efficiency and stability

4. New Features and Enhancements in JOBQUEUE 2020.01.h1

JobQueue 2020.01.h1 provides new features and enhancements as described in the following sections.

4.1 Usability Improvements

- Supported statistic job information of grouped users
- Supported batch update application server of computer node
- Optimized communication of nodes, added communication channel
- Supported switch communication channel online
- Added job count in "job on node"
- Fixed some known issues
- A few other optimizations

5. Legal Notice

The source code used in JobQueue comprises of both Open Source and proprietary software components.

The Open Source components used in JobQueue are:

- Apache tomcat 7.0.62

The Apache Software Foundation uses various licenses to distribute software and documentation, to accept regular contributions from individuals and corporations, and to accept larger grants of existing software products.

These licenses help us achieve our goal of providing reliable and long-lived software products through collaborative open source software development. In all cases, contributors retain full rights to use their original contributions for any other purpose outside of Apache while providing the ASF and its projects the right to distribute and build upon their work within Apache.

APACHE LICENSE, VERSION 2.0

Text version: <https://www.apache.org/licenses/LICENSE-2.0.txt>

SPDX short identifier: Apache-2.0

OSI Approved License: <https://opensource.org/licenses/Apache-2.0>

The 2.0 version of the Apache License, approved by the ASF in 2004, helps us achieve our goal of providing reliable and long-lived software products through collaborative open source software development.

All packages produced by the ASF are implicitly licensed under the Apache License, Version 2.0, unless otherwise explicitly stated.

- **Mysql 5.6.20**

Commercial License for OEMs, ISVs and VARs

Updated July, 2010

For Open Source Projects and Other Developers of Open Source Applications:

For developers of Free Open Source Software ("FOSS") applications under the GPL that want to combine and distribute those FOSS applications with MySQL software, Oracle's MySQL open source software licensed under the GPL is the best option.

For developers and distributors of open source software under a FOSS license other than the GPL, Oracle makes its GPL-licensed MySQL Client Libraries available under a FOSS Exception that enables use of the those MySQL Client Libraries under certain conditions without causing the entire derivative work to be subject to the GPL.

- **Inno Setup 6.0.4**

Except where otherwise noted, all of the documentation and software included in the Inno Setup

package is copyrighted by Jordan Russell.
